

PAYMENT SOLUTIONS MADE EASY

STANDALONE EFTPOS - ADVANCED COUNTER TOP

The Cadmus AC8000K Advanced Counter Top terminal is an enhanced product, feature rich, incorporating the latest banking technology. This two piece terminal is easy to use, fast and suitable for any type of business.

The AC8000K terminal, with its dedicated function keys, provides the merchant simple operation during the payment process. Whether your payment requirements are simple or complex this counter top product allows customer payment processing to be quick and precise.

MARKETS

This product is suitable for many business types from dress shops to cafes. If your business is a restaurant or bar the dedicated function keys provide easy and accurate operation along with an easy to use tipping function. Both the PIN Pad and Terminal have a back-lit display and keypad which makes it easy to read and operate even in low light environments.

THE BENEFITS OF EFTPOS TO YOUR BUSINESS

- Reduces risk associated with handling excessive cash
- Removes the inconvenience of manual payment processing via Zip-Zap machines

MORE THAN JUST EFTPOS FEATURES AND BENEFITS*

SECURITY COMPLIANT

All Cadmus terminals are developed to the latest international banking security standards, which enhance payment security and are Chip Card compliant.

ERGONOMIC DESIGN

The large screen and keys have been ergonomically designed for easy PIN entry. Back lighting ensures the screen and keys are easy to read, especially in darker environments where EFTPOS is used.

PRE-AUTHORISATION

Important for businesses that operate a deposit or bond system as a part of their service offering. Pre-authorisation capability allows you to check validity, funds availability and enables you to place a hold on funds.

TIPPING

Important for businesses where customers want to acknowledge good service. The Tipping feature is easy to activate and operate.

MULTI-MERCHANT CAPABLE

This enables multiple business entities to share a single EFTPOS terminal.

MANUAL PAN

Ideal for telephone or mail order businesses.

DECLINE ALERT

Stops declined transactions and requires merchant intervention.

MULTI-DROPPING

Multiple terminals can be installed in an environment where only a single phone line is available. This solution ensures that transaction speed and cost are not compromised.

KEYLINK

Enables communication between the EFTPOS terminal and many Point of Sale systems. This interfacing solution reduces the chance of human error when conducting transactions.

PHONE TOP UP

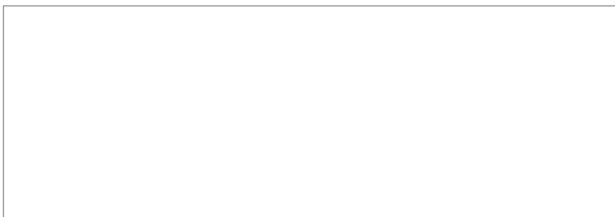

Allows your business to earn extra revenue by selling prepaid mobile phone top ups & calling cards.

BROADBAND CAPABLE

Allows you to connect via broadband (static or dynamic) with back up Dial-up via a phone line.
