

PAYMENT SOLUTIONS MADE EASY

CASE STUDY: NEW ZEALAND LOTTERIES

NZ Lotteries can now be assured that its payment systems can meet the current and future demands of its busy retail environment.

BUSINESS CHALLENGE

NZ Lotteries was updating its system and required advanced payments technology at the same time to ensure it had a future proofed system running across its New Zealand stores.

The payments technology was required to integrate to their retail system, be compliant with the latest international security standard and provide IP Eftpos connectivity.

THE SOLUTION

NZ Lotteries payments requirements were achieved using the Cadmus Touch Screen Terminal and Secure PIN Pad integrated to the Lotto Machines. This provided a fully integrated and highly secure IP based solution that is reliable, accurate and fast.

THE RESULT

NZ Lotteries is one of the first retailers in New Zealand to benefit from the advanced payment integration features and IP connectivity. The new EMV-compliant payments system provides increased speed, accuracy and security at the point-of-service. NZ Lotteries can now be assured that its payment systems can meet the current and future demands of its busy retail environment.

OUR CUSTOMER

NZ Lotteries raise money for the community by providing safe and fun games. Established in 1987, NZ Lotteries is a Crown Entity and operates under the NZ Gambling Act 2003. Their primary goal is to continue to generate improved earnings in order to maximise the contribution they make to numerous New Zealand communities.

OUR OBJECTIVE

Design and manage installation of a new integrated payments system for NZ Lotteries 1000+ Lotto stores.
